News Desk

The end of the road for Dragor

DRAGON Data has called in the receiver.

Managing director Brian Moore explained: "With the continuing difficulties of establishing profitable trading in the home computer markets in the UK and abroad, Dragon Data Ltd has requested its bankers to call in a receiver.

"This is despite great efforts in the last 12 months when the management was strengthened, the overheads cut, advisors brought in, several new models developed and further finance provided by the shareholders.

The decision to call in the receiver comes just eight months after Prutech organised a £4.5m rescue (PCW 8-14 September, 1983). The package consisted of £1.25m in new equity, £1.25m in loans and a £2m guaranteed overdraft

There have been signs for some time that Dragon has been in trouble, most recently with British Home Stores dropping the Dragon 32 and Boots deciding to add the Amstrad and MSX machines to its range.

continued on page 5 >

The ill-fated Dragon Professional, launched at CETEX just days before the receiver was called in.

Argus buys out

ARGUS Specialist Publications (ASP), a subsidiary of the giant BET group, has taken over Quicksilva. The deal, which was concluded last week, is understood to be worth several million pounds.

"Negotiations have been held over eight months, followwing an approach from the Chief Executive of the Argus group, and they reached their conclusion on May 29 at 11.30pm," said Quicksilva managing director Rod Cousens.

Co-founders and principal shareholders Nick Lambert and John Hollis have now left the company, but Quicksilva will retain the first option on their future programs. Rod Cousens continues as managing director with ASP chief executive Jim Connell becoming chairman. Ron Harris and Mike Dougan of ASP become non-executive directors while Mark Eyles becomes creative design executive.

Included in the deal are Software Studios, a wholly owned subsidiary of Quicksilva and the label under which Games Designer was launched continued on page 5

How to submit articles

Articles which are submitted for publication should not be more than 3,000 words long. The articles, and any accompanying programs, should be original. It is breaking the law of copyright to copy programs out of other magazines and submit them here — so please do not be tempted.

Accuracy

Popular Computing Weekly cannot accept any responsibility for any errors in programs we publish, although we will always try our best to make sure programs work.

Editorial

Dragon burst onto the micro scene two years ago. In modern parlance, it rose without trace. Sadly, it now seems set to disappear the same way.

Dragon was very much the brainchild of Tony Clarke, its former chairman and managing director. While a director of the ailing Mettoy toy firm, he spotted the potential of the home computer market. he persuaded Mettoy to set up Dragon and to fund the development of its first computer — the Dragon 32.

This machine was extremely successful when first launched, particularly since both Acorn and Sinclair were suffering from production problems at the time. However, the post-christmas slump and delays in producing a successor to the 32 left Dragon in a precarious position.

Prutech mounted a rescue operation in September last year, but Tony Clarke resigned and was replaced by Brian Moore from GEC. Now the wheel has come full circle and, barring another last minute rescue, Dragon looks set to follow Jupiter Cantab and Grundy into obscurity.

With market share playing an increasingly important role in the success or otherwise of micro manufacturers, companies such as Oric and Memotech must be nervous about their future prospects. Amstrad and the MSX companies too will have to take a significant slice of the market if they are to avoid Dragon's fate.

Next Thursday

Next week's star game is Dustbin Dan for Commodore 64 by Stuart Myler, catch the fruit before you die of starvation!

Dragon Data

continued from page 1

However, Dragon appeared to have weathered its latest problems with the launch last week of the Dragon Professional — a 6809-based machine with 64K Ram and integral 3½in disc drive. Additional business and MSX machines were also in the offing.

But Brian Moore still hopes to salvage something from the company. "The Dragon management has confidence in its new products and the market opportunities they represent and will be using their best endeavours in helping the receiver to explore ways of continuing trading."

Other companies which produce software and peripherals for the Dragon also hope to continue in business. "It is the blackest day so far for the 6809," said Ted Opyrchal of Compusense. "But whatever happens, we will continue to support the machine for as long as customers want software."

Quicksilva

continued from page 1

last year (PCW 15-21 September, 1983), and Quicksilva's US arm, Quicksilva Inc.

Rod Cousens believes that the takeover will help Quicksilva to expand both at home and overseas. "It is an opportunity to speed up Quicksilva's expansion programme, and an opportunity to diversify into new technological areas.

John Hollis (left) and Nick Alexander

"We would also anticipate substantial investment overseas in promoting the identity of Quicksilva."

Southampton-based Quicksilva, which was founded in 1981, employs 14 staff and currently has 70 software titles on the market. Another 10 programs are due to be launched on June 14 at The Computer Fair at Earls Court.

Nothing new at CES

THERE was little new on display at the Consumer Electronics Show which opened in Chicago on Sunday.

Commodore showed its +/4—the renamed 264—which was first shown at the CES show in Las Vegas in January. Few details were available, but the machine will cost under \$300 and will include four builtin software packages—File Manager, Spreadsheet, Word Processor and Graphics and a machine code monitor.

Sig Hartmund revealed that the machine would be available in September and said: "The +/4 is a more serious machine a productivity machine whereas the 64 is a more generalised computer."

Also on display from Commodore were the sub 1100 16 micro, the SFS 481 fast disc drive and the DPS 1101 letter quality daisy wheel printer.

Sinclair showed the QL, which it will sell mail order for \$499, and its flat-screen tv.

JVC demonstrated its MSX micro, which was linked up to a video-disc showing a golf simulation, but said it had no plans to release the machine in the US.

The upcoming Olympics made their presence felt on the software scene, with both Hess and Activision producing athletics-based games.

War of the Worlds

CRL has launched its video game version of War of the Worlds, based on the music from Jeff Wayne's top-selling album.

The game takes the form of a graphic adventure, in which you control — with the keyboard or joystick — a journalist wandering through the Home Counties after a Martian invasion.

War of the Worlds will be available on Spectrum from June 14, when it will be on show at the Computer Fair at Earls Court, priced at £7.95.

Prestel for BBC

BBC MICRO owners can now take advantage of Prestel with the launch of Acorn's Prestel adaptor.

The adaptor comes complete with a viewdata telecomms Rom and user guide. The adaptor plugs into the RS423 port on the micro and the Type 600 BT telephone socket. The Rom slots into one of the spare sideways Rom sockets inside the computer.

It also has an autodial facility and built-in sofware to download telesoftware programs from Micronet 800.

The Prestel adaptor costs £113.85 and is available on mail order from Vector Marketing, London Road, Denington Estate, Wellingborough, Northants.

Spectrum goes public

SPECTRUM Group, leading distributor of computer hardware, software, peripherals and photographic equipment, will be going public on June 19.

Although chairman Michael Stern and managing director Alan Warren only founded the company in 1980, by December 1983 turnover had reached £15m with profits of £1m. Projected profits for the six months ending June 1984 are well over £1.7m.

Much of Spectrum's software distribution goes through its subsidiary Micro Dealer UK, whose own turnover is running at about £4.8m.

After the flotation, Spectrum plan to expand Micro Dealer UK further, and set up a service company for manufacturers, distributors and

MSX at CETEX

WELL over 100 electronics companies exhibited at CE-TEX (Consumer Electronics Trade Exhibition) at Earls Court last week.

Three Japanese companies — JVC, Mitsubishi and Toshiba — had their MSX machines on display, although the micros reaching the UK this autumn will be modified versions.

A number of working Amstrad CPC 464s were on view with running software from Bourne Educational Software. GEC were also displaying the now ill-fated Dragons 32, 64 and the new £700 Professional machine, plus a new range of business software for the latter.

On the software side, Atari were advertising their new range of software, both for the Atari machines and conversions of games such as *Pole Position* for Spectrum, Commodore, BBC and Electron

At last . . .

ULTIMATE has launched its eagerly awaited program Sabre Wulf. Like Atic Atak, the program is a mixture of arcade and adventure styles.

Essentially a maze game, you must move through a jungle avoiding wild animals while searching for a map. The Wulf of the title is one of the more dangerous animals lurking in the jungle.

include Parrots and Fruit Bats. Sabre Wulf costs £9.95 — previous games have retailed for £5.50. The price move apparently reflects "increased development time".

Printer for Amstrad Itruns at up to 50 characters a

BY September a dot matrix printer should be available for the Amstrad CPC 464.

The printer, called the DMP 1, will use the standard centronics 7-bit printer interface, which will be supplied with the printer.

It runs at up to 50 characters a second with a maximum width of 80 columns. It contains a dot-addressable graphics capability and full screen dump facility.

The print is created by a 5 7 character matrix, and it has facilities for both traction and plain paper feed.

Manufactured by Sikosha in Japan, the printer will cost £199.00 and will be available in the same four stores stocking the Amstrad CPC 464—Boots, Dixons, Comet and Rumbelows.

Proposed Machine

... go to the ant for it is wise, and learn!

Jet set pizewinners

To all Jet Set Willy fans we have some very good news. Congratulations to Ross Holman and Cameron Else of London who have successfully guided Willy around the 60 screen labyrinth, collected all 83 items and deposited the exhausted jet setter into his long-awaited four poster.

Not only did Ross and Cameron beat thousands of other entries to claim their super prizes, but they have also submitted ideas to enhance the game. They didn't particularly like Matthew's sneaky random hazards feature which pulverises you after a visit to the attic, so if you want an easier route and an easier game proceed as follows:

Rewind Jet Set Willy tape, Enter:

Merge

Press Play on cassette. Once the first section of program has loaded, * Stop the cassette and

Clear 32767 Load Code
Start the cassette. After the
main part of the program has
loaded, * Enter:

Poke 60231,0 Poke 42183,11, Poke 59901,82. Poke 56876,4 If you would like to save the new version of Jet Set Willy prepare a blank tape and enter: Save "Jetset" Line 10

Save "JSW" Code 32768,32768 If not, to play the new game type Goto 40.

Remember when saving to change recorder leads.

More good news for 64 owners, the Jet Set Willy conversion is almost complete and should be in the shops shortly; this enhanced version includes 64 screens so get to bed early now, in anticipation of days without sleep.

> Software Projects Bear Brand Complex Allerton Road Woolton Liverpool.

Block interference

In PCW, May 3 and May 24 your correspondents reported problems regarding the loading of tapes caused by EMI (electromagnetic interference). One way of rectifying this problem is to obtain a thin lead sheet (about the size of a cassette player) and earth it by connecting it to the earth pin of the mains. Then place the lead sheet between the offending piece of equipment (usually the

"I'd heard they were dropping out"

tv set) and the cassette player. This blocks the EMI travelling through the air, but not that travelling through interconnecting cables.

Carl Pickin Levens Tunstall Road Knypersley Stoke-on-Trent

QL comments and queries

With reference to your page on the QL, which I find to be rather premature considering the availability (or rather the non-availability) of the QL, I have a few comments about the machine.

1) Why call the programming language SuperBasic when it bears no resemblance whatsoever to Basic?

2) Why not make the machine, manufacture a few hundred and then announce it—rather than announcing it and then designing it?

 Microdrives hardly do justice to the rest of the machine and defeat their purpose of cheap, high-speed, storage devices by their high cost (5p per K).

4) QDOS may be the best thing since the floppy disc, but I prefer CP/M and Wordstar.

A Cunningham 47a Pentwyn Hill Top Ebbw Vale Gwent

Only one reply

The letter from J Roberts (PCW Peek & Poke 17-23 May — headed 'Waiting Game'), and your reply, require further comment. You suggested that you would not submit a program for evaluation to more than one company at a time. If I had taken that approach I would still be waiting for my first reply!

My son wrote a program for the most popular machine, the 48K Spectrum, during 1983. The program was most original, and to date there is still nothing like it available. After local expert advice, and many favourable comments, he was urged to get the program on the market. I forwarded a copy to a number of software houses advertising for programs, but only received one reply. The others still have the tape, and have not sent any acknowledgement after over four months.

The local press heard of my son's program, and did a very nice article on him, which led to an approach from Anglia Television. Two months ago he was featured on Anglia News, and during the interview his program was highlighted and explained better than any other computer program or advertisement I have seen on television. I wrote again to the same companies, pointing out the publicity, and asked for a decision on marketing, as the need to have the program available was urgent. Only one company had the decency to reply.

I know this program is far superior to a lot of the disappointing software currently appearing in glossy advertisements, a fact which has been confirmed from many sources. However, like Mr Roberts, when it comes to contacting the people who matter, we get no satisfaction. Could it be that these companies are already making too much money?

Keith Alston 2, Rosetta Close Wivenhoe Essex

Music and micros

The Capital Region Information Centre (CRIC), part of the Micro-electronics Education Program (MEP) are producing a booklet for music teachers and students entitled Micro-computers and Music Education. Following an introduction to the subject, the booklet will contain a list of useful software/hardware currently available.

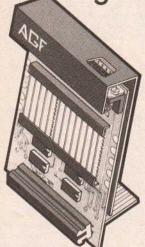

Could you find room in your next issue to announce this, and ask any readers with relevant information regarding software/hardware to send details to the following address.

JOYSTICKS

TERFAC

Programmable Interface

Hardware programmed, this interface attains Joystick or Trackball compatibility with ALL Spectrum or ZX81 software.

Without internal memories or tapes to load the direct addressing mode offers the fastest computer response to controller movement with programming being retained when the power is

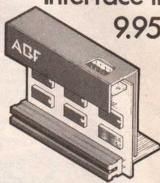

Eight directional capability is automatically achieved by just setting up, down, left and right.

The hardware approach is totally compatible with all key reading techniques unlike memory programmed devices.

Supplied with Quick Reference Cards, to speed up setting to your favourite games, demonstration cassette and twelve months quarantee.

26.95 plus £1 post & packing

Interface II

Now the AGF Interface II is even better value. Since Now the AGF Interface II is even better value, since we pioneered the cursor-key interface in October 1982 there are now over 100 games or utility programs with either the AGF option or cursor key controlled — that makes it unbestable at this new low price.

Still incorporating the all important rear expension con mector which means other peripherals can be connected at the same time i.e. Ram Packs, Printers, Speech Units etc. and of course the key replication principle used guarantees this will never conflict electrically with any other add-ons.

RomSlot

All ROM Cartridge software can be keyboard controlled so a joystick is not essential.

Only high quality programs are available on ROM and soon a whole new range is to be launched by Parker Garnes exclusively on cartridge, for the Spectrum.

RomSlot's unique 'Game Restart' will restart the game at any time during play. When no game cartridge is in use this becomes a useful computer reset facility from crashes or conventional machine code programs.

RomSlot is fully compatible with all other add-ons via a rear connector and is cased and fully guaranteed for twelve months.

plus 50p post & packing

7-13 JUNE 1984

me-A-Climber

Collect three flags before time runs out in this game for 16K Spectrum by Alan Jarvis

ime-a-Climber is a 10 screen climbing game, where you (the climber must collect three flags before your enemy (time) runs out. The flags always appear at the same positions on the screen every time, but the scenery around them always

You start at the bottom level each time and must scale the levels to reach the flags in as fast a time as possible. Each screen is made up of girders and ladders (there are no ladders on the first two screens).

The climber can jump from girder to girder, ladder to girder, ladder to ladder, drop from ladder to girder etc. But beware of some flags! Collecting the third flag on each screen will put you into the next screen, but some flags must be left until last. These flags can easily be collected but are often 'out on a limb' and the drop from them is often big enough to kill the

The climber also dies when his time runs out, he jumps into a girder, or falls too far from a girder/ladder. Beware the 'Z' key, it will move you down whether there is a girder below you or not.

Short instructions are given in the game. but the keys are:

a - up n - left CAPS/n - jump left z - down m - right CAPS/m - jump right

Main variables

I = lives

s = score

le = level

fl = flags collected

x + y = man's co-ordinates h = high score

Gosh, it's GOSH

David Kelly talks to Rod Cousens, Vice Chairman of the Guild of Software Houses

At the end of last month GOSH — the Guild of Software Houses — approved its constitution and formally inaugurated itself as the representative body for the interests of the British games software companies.

Membership of the group is now over 30
— including most of the top names in the industry. So it seems an appropriate time to take a look at the group's aims.

Undoubtedly the biggest challenge faced by GOSH is the job of controlling the now rampant commercial piracy of its member's tapes. Indeed, this single goal is the reason why GOSH's two founders — Quicksilva MD Rod Cousens and Virgin's Nick Alexander — have been successful in drawing together so many companies, which would normally be fiercely competitive, to a meeting in May at a London hotel. The problem of piracy affects them all — the more so now, at the start of the Summer, traditionally the quietest part of the year.

Home taping always used to be the one topic to inspire apoplectic reactions from games house bosses. That's changed. Commercial piracy has fast become big business.

"Piracy has now reached levels which suggest software houses have got to take action soon," says Rod Cousens.

"Just after Christmas Nick and I were called to the offices of the British Phonographic Institute — the watchdog of the record industry. Through their solicitors they had commissioned a raid on a known audio counterfeiter — searching for the music industry — and when they went in they found significant quantities of copied computer software. Copies of such a standard — with colour inlay cards and the body of the cassette the same colour as the original — that it was difficult to distinguish them from the original.

"That is just one example. At this very moment the Quicksilva game Fred is avai-

Open season

lable at market stalls up and down the country selling for between £1.50 and £2.50. These are copies — around 30,000 tapes are involved."

Big figures indeed. Certainly quite enough to damage any company. Even the most successful of the companies in the UK's burgeoning games market can ill afford that level of counterfeiting.

The reason for the dramatic increase of commercial software piracy is simple. Measures being taken against pirates in the record and video industries are showing signs of being effective. And those

same illegal operators are switching their attention to computer software. Video games are much in demand. Often a computer game is more expensive than an audio album. And software piracy is virtually open season. "Software houses don't seem to be keen to take preventative measures to combat illegal copying.

"The most obvious reason for this reluctance on the part of the software houses to take action is because there is no obvious legal protection they can seek. A precedent that computer software is covered by copyright badly needs to be established.

"In attempting to establish that precedent any software house is exposed to the threat of substantial damages should the attempt fail. Damages of such a level that the company might well be forced into liquidation. Hence there hasn't been a flood of companies trying to straighten the law out."

Socially acceptable

This is where GOSH comes in. It is in the process of incorporation and it will represent its members in any legal process. This has involved the setting up of a legal fund to fight piracy. So far, over £50,000 has been pledged by GOSH members to fight piracy. Each member contributes an amount related to the annual turn-over of the company — a business collated by a professional intermediary. Such information is closely guarded by companies in an industry where hype is second nature.

"But the overwhelming evidence of the scale of the problem has now prompted them — through GOSH — to finance the legal process that is necessary to establish once and for all that software is subject to the same protection afforded by law to an audio or video work."

Home taping is a much more difficult problem to tackle. Indeed, it is questionable if it can be tackled at all. Like audio and video home taping, home duplication of software is a 'socially acceptable' crime.

An even more thorny problem for the software industry is the whole question of copies onto alternative media. Just as one might copy a record onto a cassette tape for one's own use in the car, most owners of Microdrives or discs are keen to copy their cassette software onto other media. Discs and Microdrives are faster, more convenient and more reliable. So who can blame them. Indeed, Sinclair for one is actively encouraging UK software houses to include a cassette to microdrive copy option in all their cassette programs.

Rod Cousens admits the whole home copying question is tricky. "It is a totally

impractical area to police — most of those doing the copying are minors anyway. The one area we are keen to take action against are the blatent copying clubs which exist in user groups and schools."

"We are looking to parents and teachers and magazines to educate people that home taping is hurting the software industry. If home taping is got under control it can only benefit the consumer. Profits of software houses will go up, game prices can then come down and more money will be available to develope new games".

GOSH will, he feels, play an important role in the continuing expansion of the British game industry. "The industry is still young and naive — people who lack commercial experience are now being subjected to a rude awakening because their livelihood is being threatened. Many of them ignore, for example, the overseas market which is where they are most abused

"Pirated software is being imported into this country from agents who hold licencing and manufacturing agreements abroad. Yet in certain countries — like Germany and Holland — you can go to the police and they will take criminal proceeding on your behalf. Illegally copied software from British houses is blatently sold in multiple retailers in Holland, Portugal, Germany, Italy, Belgium. It goes on and it must be stopped."

Although software piracy is for the moment GOSH's main concern, it is also hoping to legitimise the industry as far as the consumer is concerned. If any customer has a complaint against any GOSH member then it will be investigated and if the complaint is upheld then the member could be excelled.

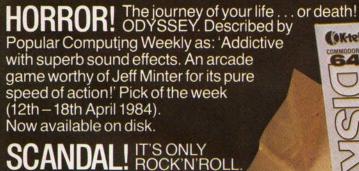

GOSH has a dealer charter and is hoping to establish a code of conduct between software houses and the Guild of Computer Retailers. At the same time GOSH offers the industry a representative body. "You can't just go and lobby MPs for a change in the copyright law unless you are recognised as such," observes Rod. The emergence of GOSH is further indi-

The emergence of GOSH is further indication of the painful changes taking place below the surface of the software industry. It is having to grow up very quickly indeed. It must do so if it is to survive.

But one cannot help but be a little sad. In doing so it will lose much of its charm. It will become more competitive, less friendly, and not as exciting. The professionals are taking over.

SHOCK! HORROR! SCANDAL!

SHOCK! CITYATTAK. The seven screen, all action, machine code game. Superb graphics, smooth game play, a tough challenge for even the hardened arcade action addict. Now available on disk.

HOW TO TURN YOUR SOFTWARE INTO HARD CASH.

Turning a great idea into a profitable idea isn't easy.

It needs skill, patience and sheer hard work. But to be really profitable, it also needs the backing of a large, respected company.

At British Telecom we are now looking for writers of games and educational programs to help us launch a new and exciting range of software.

If we like your idea we'll send you a cheque straightaway as an advance on rovalties.

Then we'll package your program, advertise it and distribute it with the care and attention you'd expect from one of Britain's biggest companies.

So if you'd like to turn your software into hard cash, simply send your program, on cassette or disk, to

FIREFLY

British Telecom, Wellington House, Upper St. Martin's Lane, London WC2H 9DL.

Galactic garage

Jet Power Jack from Program Power has received a lot of publicity recently and with a great deal of justification — it is a highly enjoyable game.

The object of the game is to manoeuvre Jack around his galactic garage (and prison) using his rocket back-pack, to collect fuel pods and return them to the waiting spaceships. The task is made more difficult as the garage is inhabited by a range of creatures and assorted aliens and fittings on the ceiling and edges of platforms are electrified, encounters with either of which cause Jack's demise in a pool of red on the garage floor.

There are five very entertaining screens to choose from with the monsters becoming increasingly devious at each successive level. On top of all this Jack has only one minute to complete his re-

fuelling activities.

All of this adds up to the sort of game where you tell yourself you will deal with all those important outstanding chores only first you'll have just one more game . . this one is definitely the last . . . no, that didn't count . . .

Simon Wilson Program Jet Power Jack Price £7.95 Micro BBC B Supplier Micro Power, Northwood House, North Street, Leeds, LS7 2AA.

Pranged!

At around £15 Aviator is at first sight a somewhat expensive game, so let's consider what you get for your money.

The actual flight simulation is designed to be as consistent as possible with the characteristics of a Mark II Spitfire. In addition to aileron and elevator control using the joystick (or keyboard equivalent) the pilot can operate the rudder. throttle, engine on/off, undercarriage, flaps, brakes plus gun and gunsights - with such a complete range of controls the flight response is quite stunningly realistic. The lower half of the display contains a full set of flight instruments, all fully functional; the upper portion reveals the cockpit view of the flight scenario including terrain features plus trees and fields to aid in navi-

The highly sophisticated flight program supports several advanced features, allowing you to perform aerobatics (rolls, loops, spins and inverted flight) including the possibility of flying under a bridge, buzzing the town of Acornsville and, should the need arise, attempting a 'belly landing'.

I must admit to having personally written-off a number of Spitfires to date in a series of 'prangs' involving bridges, hills, runways, buildings and aliens, plus the river and other non-specified 'ground' - all things considered I've managed to walk away from some pretty horrific crashes. My first flight terminated after about 2 mins. but I am now much improved and confident in my abilities to loop the loop, fly under the bridge and even 'bag' the occasional alien if only I could land . . .

Finally, if you're still comparing Aviator in terms of price, its durability as a lasting source of entertainment must make it a good investment. After many hours flying my appetite for the game continues to increase.

Simon Wilson

Gothic listings

IsP's Character Generator is a utility which allows you to define UDG (user defined graphics) characters, and to redefine the character set (allowing 96 UDG's in effect.) The idea is not new, but this is quite a good implementation.

The program revolves around a menu which has eight options. These are: define a character, display individual character, display whole character set, reset character set, save character set and UDGs, define a UDG, display all UDGs and finally alter character/UDG.

The program is written entirely in Basic, but this does not matter as it is fast enough for the purpose. The only real problem that I found with it is that there is no *Abort* option when you are designing a character.

Probably the best part of this utility isn't in the program at all. On the reverse of the tape are pre-designed character sets: Gothic, Computer, Algerian, US type, Cut-in and Revue. These give you an example of what is possible, and you can use them to liven up your own programs as well. Listings look particularly good in Gothic.

Quartz prisms

Recently there has been a trend towards games incorporating elements of both arcade and adventure within a single program. A different approach to mixing the two styles is found in Attack on Windscale. This consists of packaging two games together under one title - one game of each type. The story line involves the defence of the Windscale power station against alien invaders, and by completing the various skill levels of the arcade game you obtain clues which aid you in the adventure. However, you cannot begin the second game approach to games programming. However, the games themselves are perhaps not as original as the overall concept. The areade section is a pretty straightforward shoot 'em up.

The adventure game is in two parts — first you must find some quartz prisms hidden in the Windscale complex, and then find an alien transmitter and use the prisms to destroy it. Both phases of the game are primarily text based, although the first part has a few block graphics pictures.

Overall, this is an interesting package — a bit different from other games for the 64.

Reviews

Derring-do

Wizard's Challenge, Ian Muriss's adventure for the BBC B, starts in a school - not the most likely setting for episodes of derring-do. Little jokes about school dinners leaven the lump. It is a very traditional game with standard key words and a collection of passwords for use in gaining access to various areas in the park, tunnel, desert, castle or pyramid that soon become the backdrop to the quest. You need logic rather than inspiration, luck or lateral thinking to get around.

The text uses the colour facilities of BBC's Mode 7 to brighten the proceedings and you can save the game when you want to pause for a while, or before you risk losing your life. This is a very useful feature to save hours of repetition. As usual you have to collect a dozen treasures and bring them to the evil wizard.

Clearly aimed at school pupils who love to day-dream, this is a competent adventure game that should keep novices busy for a day or two, though old hands may find it fairly easy to crack.

Under water

In the early days of the Commodore 64, the choice of readily available software was very limited. One of the first programmers to write a

number of games for the 64 was Ian Gray of Interceptor Micros. He has continued to produce a steady stream of new programs since, one of his latest being Aquanaut. Comparing this with some of his earlier efforts, it is quite striking how the quality of the

product has improved since the early games. For example, the graphics in Aquanaut are excellent although fairly uncomplicated — the scrolling (both horizontal and vertical) and the movement of objects around the screen are as good as any I have seen on the 64.

The initial good impressions are completed by the rapid loading of the game which loads in about a minute and a half thanks to a utility called *Ultra Load*. Unfortunately, one aspect of Ian Gray's games programs has not improved with time — the playability of the game itself!

The game has an aquatic version of a pretty standard scenario — you have to pilot a submarine craft above the sea bed and through caverns avoiding and destroying various threats like hostile craft, torpedoes and mines. However, the difficulty of the game is such that it is no longer challenging but merely irritating.

Richard Corfield

Program Aquanaut Price £7.00 Micro Commodore 64 Supplier Interceptor Micros, Lindon House, The Green, Tad ley, Hants.

Barbarian

The strategy game *The Fall of Rome* is played against the background of the Roman Empire of 395AD.

In 12 turns, each representing five years, you must try to expand and preserve the Empire, although the game's title suggests your chances are slim. Each turn is divided up into three phases: the Income phase to set you up financially, the Movement phase when you can move your forces to prepare for the Combat phase in which you can attack any one Barbarian tribe or army in a Province.

This game requires a fair

amount of playing time to fully understand it and gain successful results. I found that it is difficult to allocate sufficient legions to the high income provinces in order to keep the enemy at bay, which means you are liable to lose all of the best provinces fairly early on in the game.

As this game is written in Basic, you have to wait after each phase for a response from the computer. However, it is enjoyable to play and presents a good challenge.

Luke Tornero

Program The Fall of Rome Price £6.99 Micro Spectrum/ BBC/CBM 64/Atari Supplier Argus Press, 1 Golden Square, London W1R 3AB.

Strike quickly!

Monsters & Magic by Jo-nathan Holmes is much more exciting for my money than traditional adventures. It attempts to computerise 'dungeons and dragons' games You begin by setting up your own character from a range of types. You choose your profession, physical type (human, elf, dwarf) and attributes. By selecting carefuly from the weapons, spells and powers on offer you establish a character to tackle the adventures ahead. This factor alone would allow some variety in the game each time you play where ordinary adventure games become boring once completed. Your hero changes as a result of the adventures he or she undergoes and may have rather different characteristics when you enter part two.

You may find it useful to

type *TV255 and then Break before starting to load as some of the text is very near the top of the screen. After the character program has run, the game itself loads and then you load in a file describing the location of your adventure.

The Beeb has always suffered from memory limitations in long games, but this has not stopped Monsters & Magic from including limited graphics to show you what each room looks like. The function keys are also used to allow you to respond quickly in emergencies. For here's the rub when you are attacked in this game there is a real time risk. When the message "strike quickly" flashes on screen you must take it literally and hit. spell or flee at once.

Jan Watterson

Program Monsters and Magic Price £6.95 Micro BBC B Supplier Marketing Ltd Hampstead House, New Town Centre, Basingstoke.

A filed copy

Geoff Dye presents a utility program for copying, verifying and reading data files

ilecopy is a useful utility program for reading, verifying and copying data files to either another tape or a printer output.

This is a relatively simple concept, but has already proved to be most useful in helping to reconstruct 'corrupted' tape files, as the screen display also shows an item number alongside the data string.

Instructions are included as on-screen prompts, and features such as item count verification and fast/slow screen listing are standard. Pause loops are employed to enable the user to 'break' the program in various places whereby Goto other program sections is possible without losing the data stored in the main A\$ array.

Keying < RETURN > in response to

Filename? will suffice to start the process, but a filename is desirable when saving to a new tape is intended.

Upon my word!

Malcolm Davison looks long and hard at the Psion QL packages, beginning with Quill, the word-processor

The Sinclair QL application packages — written by Psion — offer a powerful integrated package adequate for all but the most exceptional uses.

The packages are modelled on the best of the state of the art software, and the emphasis has been on simplicity of use, rather than exceptional versatility, so that even a casual user will experience little difficulty in getting to grips with them.

Over the next few weeks we will have a detailed look at each program's strengths and weakneesses

To kick off let's try Quill, the word processor.

Quill

My first disappointment was the fact that the program took two minutes to load from the microdrive. I felt that my main reason for buying a QL had taken a dent — my Spectrum, for example, loads the *Tasword* word-processor in much the same length of time. As the days wore on, though, my view that the Microdrives were a hindrance changed. I began to realise just how good the Psion programs are.

The main Quill display provides you with basic information on which function keys do what — F1 for help information, cursor keys to control cursor movement, Delete with the Control and cursor keys, alter typeface with F4, change mode (from insert to overwrite) with Shift and F4, remove prompt to enlarge the typing area F2, to summon commands F3 — with the commands given in two screen headings, and, finally, Escape to get out of anything you started that you don't want to pursue.

A bad medium

You can literally start typing in, and with this most basic outline, very easily get by with little further knowledge. In fact your first question might very well be - How do I print out or save my text? A curious prod at F3 offers you the first list of commands Commands 1 mode - giving both a Save and a Print command, It tells you to press the first letter of the command; say 'S' - and not unexpectedly it asks for a name for the document. Typing this in and pressing Enter sets the microdrives into action. You are given an option to make a duplicate copy on another cartridge or to return to the text. If your document is either important or lengthy a duplicate would be most advisable - the Microdrives in the main are reliable, but you will at some stage see the message 'Bad medium' which is not a comment on a spiritualist's performance!

The screen is automatically set to 64 or

84 characters depending on whether you selected the TV or Monitor option when you switched on the QL. There is an option to alter it to 40 characters using the *Design* command, but I suspect that few people, except those with impaired eyesight, will select this option.

All the commands are as easy to execute — prompts all the way. There are no abstruse key codes you have to learn, and little practice is called for. Sections of copy can be deleted or copied and the areas selected are highlighted before the command is carried out. When you change typeface to one of the other options — either Bold, High script (subscript), Low script (subscript), or Underline the screen shows a representation of the type, which greatly assists the design and layout of a document.

I was concerned that my printer might not be suitable — but I need not have been been — it is neatly catered for. An installation routine — which is not part of Quill itself — is provided for the benefit of Archive, Quill and Abacus. It creates a datafile with the necessary specification which

has to be copied to each of the relevant software cartridges. Communication protocals are entered, along with page size, characters per line and control codes to access the alternative typefaces, including two useful 'translate' options to alter a hash sign to a pound sign and other such conversions —

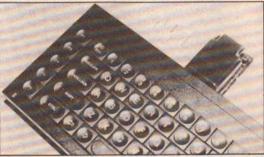

especially useful for daisy-wheel printer owners. One shortcoming of this installation procedure is that modification of a few of the items, perhaps to switch printers—would mean deleting the datafile, and setting up another. It would be much better if you could make temporary modifications from within the Quill program itself. Another oversight is that so few alternatives of typeface are allowed—some printers offer italic, expanded print, double-strike and more besides. Yet the installa-program gives you no spare capacity to make the fullest use of your printer's facilities

Search and Replace functions, which perhaps could have been combined into one command are valuable. However, as with many of the commands there are significant delays while the Microdrives whirr into action. There is a real annoyance in having too many commands with the same

initial letter because you are in Commands 1 Mode with the first selection of commands offered and you chose 'S' you will get Save, when you may have really wanted Search on the alternate batch of the commands — Commands 2 Mode. So, if you want a command you have to look for it on the heading — a thing that the manual makes a point to remind you of.

The program allows left, right or centred justification - at least, that's what the manual says. In the printing world they would be described as justified left, ragged right, justified left and right, and centred. But not right justified - ragged left. However this can be achieved by setting a Tab Right. A centred tab option and decimal tab are also welcome additions to the more conventional typewriter tab. Incidentally, tabs are simple to set using cursor keys and the space bar and can be easily removed too. You are generously provided with tab positions at every tenth character which must be studiously removed, one at a time should you wish to set your own arrangement.

You can add Header and Footer notes, a single line that will be printed on all pages, its position left, centre or right may be selected. Forced page breaks can be added — which will ensure that information is not split by a form feed — and also provides a means to select part of a document to be printed — a requirement that I

feel is poorly catered for. I often may only want to print out a table or list from a file and *Quill* does not make this very easy. Similarly areas of text cannot be saved, only the whole document, while conversely, sections of text may be added anywhere in the document using the *Merge* command. If there is the one why not the other?

On first beginning to use Quill, the porgram adopts a standard default mode—left and right margins, an indent, you automatically start in Insert mode rather than Overwrite (which I personally prefer to use only when I need to), 66 lines per page and surfeit of tabs. It is a pity that you cannot tailor the program to allow you to set up your own standards, start-up mode or to keep different alternatives on file. It will get tedious for users continually having to adjust Quill to their own preferred format with each letter they write. You also return to

The QL Page

the standard options having saved and abandoned and might wish to start on another document on the same layout.

Quill's handling of hyphenation is a little unusual. It relies on the user deciding that a particular word needs a hyphen - typically this would be in the normal left and right justification mode, where 'rivers' can form in the text because of the computer's spacing of words. Some word processors stop you in full creative flow and force you to decide whether or not and where to add a hyphen but Quill hyphenation would best be done after the text has been typed to reform the type to the optimum spacing. Doing it this way, certainly prevents an irritating delay, but could cause you to miss hyphen possibilities to optimise the spacing.

The manual refers to a View option to pan across documents wider than the screen. This option did not actually exist in the program. Also, other reviewers of this package who have described the Glossary command in intimate detail must have seen a pre-production version, or worked from the provisional manual — because it does not exist on the machines winging their way to their patient new owners.

For the record, Glossary would have offered the facility to assign any key to recall phrases or commands which you have defined and saved on the Microdrive. Twenty-six or so items would have been available. Shame about all that!

Movement through a *Quilled* document is handled by specifying a page in a *Goto* command, with the further option to move to the start or end of the document. Page breaks are shown as lines on the screen.

Command language

The avid word processing person using Quill will miss some of the more sophisticated features of mainstream word processors that are not offered. There is no boiler plate' option - that is, the pulling together of standard paragraphs to create a composite text. There is no facility to merge data. Take for example 'topping and tailing' - putting names and addresses into standard letters. A pity since Archive could have provided the source of the data. The mechanics to send out mail-shots, a frequently quoted reason for buying a word-processor, do not exist in the Psion packages. You can't use a command language to access commands quickly or execute commands to, say, print a number of files. A forms handler to facilitate data entry into standard layouts is a feature that not many packages can boast - and indeed Quill does not have one. But in some business environments this can be a useful asset. You can't tackle two column printing with Quill because resetting the margins, say to the right of existing text immediately causes the existing text to migrate and reform at the new margin — Pity!

I was pleasantly surprised at the speed with which you can move the cursor around the screen, but less impressed at the speed of appearance of the text on the screen. A fast typist will on occasion be several words ahead of the display and with an 8/32 bit processor it ought to do better than this. On the plus side it is very welcome to see the text reforming whatever hacking about you do to it, without having to be prompted. This sort of facility along with a very useful word-count capability makes this an ideal word processor for the freelance writer or for the business user who may previously have been put off by the complexities of most wordprocessing packages.

This package with a few additions is likely to receive a following in the business market if Psion do, as they have hinted, sell the packages for other micros.

It seems untair to criticise the packages at all as they are included free in the already competitive price of the QL — but Psion want them to be taken seriously, and they are so very nearly in the 'big league' it's a pity if they don't take this short step to perfection.

Next week: Easil

Almost all the copies of PCW that you missed can still be bought as back issues for only 50p, including postage and packing. An index of the contents of the 36 issues published in 1982 is now available from the Publishers for only 1:20, it includes full details of all the programs, routines, reviews and news that you might have missed. Please send me the following back issues at 50p each; Please send me a copy of the 1983 PCW Index at £1.20 | I enclose a cheque postal order for £ Name Address Please return to Back Issues, PCW, 12-13 Little Newport Street, London WC2R

SOON ... COMING SOON ... COMING SOON ... COMING

FAST LOADING ON THE COMMODORE 64

HYPERSAVE

IS THE QUICKEST AND MOST VERSATILE FAST LOADER YOU CAN BUY — BAR NONE!

Once **HYPERSAVED**, any cassette program will independently reload at over **ten times the normal rate**. No more tedious waiting!! A 40K program will load in under 80 seconds, compared with 13½ minutes at standard rate! This is faster than the Commodore Disk Drive! Look at these features:

- * EIGHT additional Basic commands
- * FULLY independent loading
- * AUTOSTART facility for both Basic and machine code programs
- * SPECIAL features Hypersave works with all your programs

Hypersave is supplied with full instructions to easily convert your existing programs to load at **HYPERSPEED.**

Hyperspeed leaves you in full control — it resides at the very top of memory, and its routines may be called at any time. Powerful additional aids are provided:

- * HYPERSAVE and verify up to 48K continuous ram even hidden ram
- * HYPERSAVE and verify the Basic program currently in memory * Save any block of RAM (including hidden RAM) at standard rate

PLUS!! FREE with every order. SECRETS! Reset switch. Stop, Examine, modify and recover machine code programs. And a comprehensive guide to cassette saving and loading on the Commodore 64, including much previously unpublished, SECRET information. How programs are protected. How to protect your programs.

Assimilate. And Stimulate.

From Sunshine, a book all about simulation techniques on Sinclair's new QL, written with the unique benefit of actual QL experience. Many entertaining, intriguing chapters explain how you can get your QL to output what you need, to help your hobby, your business – or your curiosity. Inside, you'll find how to develop the ability to fully analyse problems and confidently develop your own simulations. And you'll be able to stretch the potential of your new QL to the limits.

Using our modelling techniques you can create an economic model, or a flight simulator. You can engineer a more efficient engine, or manage a project better. All on your QL, with the help of this vital new book, An Introduction to Simulation Techniques on the Sinclair QL.

Order today, using the coupon or from your local bookshop or computer dealer.

COURSEWINNER

The Punters Computer Program

COURSEWINNER allows you to use the power of your computer to get the edge on the bookmaker.

- COURSEWINNER contains a database full of detailed information on all English and Scottish flat courses.
 The ten leading lockeys and trainers, and effect of the draw is detailed for each course.
- This information can be displayed on the screen at any time.

 The program analyses these factors combined with the results of the last three outings, starting price and weight carried.
- COURSEWINNER is simple and quick to use, yet very powerful.

Boxed with detailed instruction booklet.

Price £12.50 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)

SPECTRUM (48K), BBC (B), COMMODORE 64, DRAGON, APPLEHIJIE, ATARI (48K).

POOLSWINNER

The Ultimate Pools Prediction Program

- POOLSWINNER is the most sophisticated pools prediction aid ever produced. It comes complete with its own massive database.
- Can be used for Scoredraws, Draws, Aways and Homes.
 The database contains over 20000 matches (10 years league
- football). It updates automatically as results come in.
- The precise prediction formula can be set by the user. This allows development of your own unique method.
- Package is complete with program, database and detailed instruction booklet.

Price £15.00 all inclusive IMMEDIATE DISPATCH (RETURN OF POST)
Available for: SPECTRUM (48K), ZX81 (16K), BBC (B), COMMODORE 64, DRAGON,
APPLE II/IIe, ATARI (48K).

Available from dealers or direct (return of post) from:

AT LAST!

A RANGE OF QUALITY ARCADE GAMES FOR THE SHARP MZ700

HUNCHY. A first for the Sharp! £5.95
Rescue Esmerelda from the castle via 8 screens of action-packed fun.

TWIN PACKS — Two fast m/c games for the price of one.

PACK I: U.F.O./NOUGHTS & CROSSES £6.50
U.F.O. — Prevent the invasion of earth by alien beings; the game features a high-score table and becomes faster as

NOUGHTS & CROSSES—Standard game for two people but very fast.

PACK II: STARGATE/AIR ATTACK

STARGATE — Defend the Stargate and prevent the enemy entering your galaxy.

enemy entering your galaxy.

AIR ATTACK—With a World War I biplane, blast your way through five levels to the 21st century.

PACK III: MAZEMAN/SAUCER SIMON £6.50
MAZEMAN — Faster than Pacman and with many nasty
modifications. Beat the ghost to the fruit and open the
second maze.

SAUCER SIMON — Communicate with an alien craft by copying a series of colour tones. Up to 40 sequential tones and seven levels of difficulty.

MANY MORE PROGRAMS AVAILABLE Send SAE for details. Trade enquiries welcome

JLC DATA DUPLICATION

CASSETTES — DISCS — EPROMS

- * 7 YEARS DATA EXPERIENCE
- * HIGH LEVEL OF SECURITY
- NORMALLY NO MASTERING FEE
- * NORMALLY 7-10 DAY TURNAROUND
- * 24 HOUR TURNAROUND SUPERFAST SERVICE IF REQUIRED

Cassette Duplication — for most micros.

Disc Duplication — 35, 40, 80 track S/S, D/S, S/D, D/D.

Eprom Duplication — most types. All data verified.

Blank Cassettes, Discs, Eproms — bulk sales only. Blank Labels — most colours — bulk sales only. Labels in sheets or rolls.

NEW SERVICE

Letter-heads and forms in rolls or fanfold for computer printing.

Telephone: (0226) 87707 24 hours 7 days a week

Enquiries and accounts to: JLC DATA, 49 CASTLE STREET, BARNSLEY, SOUTH YORKSHIRE S70 1NT

In the interests of security, callers without appointments or proof of company status will not be seen.

Chemical attraction

James Marsden faces the elements in this chemistry revision program

hemistry Revision should be useful for exams, it runs in about 6K and is easily convertible to other machines especially the Pet and Vic (+3K).

It was necessary to write the program in lower case mode as chemical symbols are usually shown with a large and small character, eq. Ar for Argon. Lower case or text mode unfortunately when listed shows only graphic characters for capital letters. thus making the writing hard to read. For this reason I have included a Rem statement by each graphic line showing what the letter is.

The program helps you to learn the first twenty elements in the Periodic Table and the Electrochemical Series - a fairly important part of the G.C.E. 'O' Level and C.S.E. Examinations Syllabus. When you run the program a menu is displayed:

Option 1 This lists the twenty elements, their symbols, relative atomic names and atomic numbers.

This lists the electrochemical Option 2 series including symbols and charges.

Option 3 This tests all symbols from above two choices - a name or symbol is printed and you must type the answer For example: To H you would type hydrogen

To iron you would type Fe Option 4 This tests you on what order the elements come in. It will

accept symbol or name. Option 5 This will test you on the element's atomic number.

Option 6 This choice tests you on the order of the Electrochemical Series (most reactive first). It will accept symbol or name. Option 7 This tests you on the charge of

each electrochemical element

(K = +, I = -).This exits from the program. Option 8 (Note: When typing in the program all REM statements can be left out.)

Graphic notes for conversion Turns off the keyboard toggle for Chr\$ (8) upper/lower case.

Turns on the keyboard toggle. Chr\$ (14) Places machine in lower case mode. Places machine in upper case mode. Chr\$ (142) Poke 198.0 Clear the keyboard buffer.

Variable List

- Function. FS(X) - Element names SS(X) Element symbols. A(X) Element atomic numbers. ECS(X) Electrochemical elements. ES\$(X) Electrochemical symbols. CS(X) Electrochemical charges. A\$ Used in Get and Input statements. General For - Next loops.

71 & 72 Hold random numbers from function. X\$ Used to format answers to screen Decision when continuing = 0. Return to Menu = 1.

Program notes

- Changes border to orange and screen to blue. Defines a function that when called will return a random integer number

between 1 and x inclusive. 40-150 Assigns variables 160-270 - Display menu. 280-310 Act on choice. 320-390 Display first twenty elements. 400-470 List electrochemical series. 480-650 Test on chemical symbols. 660-920 - Test on element order 930-1050 Electrochemical order. 1060-1220 Electrochemical charges 1230-1250

1260-1370 Subroutines for key presses. 1960-2090 Lists control characters.

- Quit

No axis to grind

lan Trout draws a new angle on graph plotting for the 16K Spectrum

raphplot will draw any cube, square or Gstraight line graph. You must input four values for the equation, while an 8×8 section of a 99×99 graph is selected and displayed on screen.

Once the graph has been drawn, several sets of options are given. I have included an overplot option for all those A/O level maths students who, like me, would often like to know what two graphs would look like when superimposed on each

Program Notes

5	Sets screen colours.
100-120	Defines user-defined graphic
490-500	Prints out a fresh equation.

Values for the equation are input. E\$ is worked out and printed. Draw screen

2000-2095 The x and y starting points are input. 3010-3070 Plot graph. Quit routine. 4040-4090 Display second set of options. Save graph Screen\$.

Variables

510-680

700-730 1000-1010

ggnn,gggn

- when overplotting one graph with another.

- input values for equation. - horizontal section. - vertical section. - answer x to equation.

- holds equation in full form - input title for screen save. 5 BORDER 0: PAPER 7: INK 0:

Try pulling a stunt like this on your Spectrum

Leap on a moving train ... jump from carriage to carriage ... duck under fast-approaching bridges.

But before you do anything, make sure it's with Sinclair's new action-packed game – 'Stop the Express'.

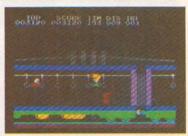

That way, you can try dramatic feats like Buster Keaton's – without risking your neck!

Stop the Express' is one of five exciting new games from Sinclair. Its graphics are superbly fast and sharp. The action is non-stop. And the challenge is a very tough one.

On top of a racing express, you're chased by knife-throwing bandits. And inside the express, there's even more trouble.

Will you ever get to the front and halt the train? Or will you be well and truly bumped off?

All five new Sinclair titles – Stop the Express, Bubble Buster, Zipper Flipper, Eric and the Floaters, and Driller Tanks – are for a 48K Spectrum. You'll find them in the shops – today.

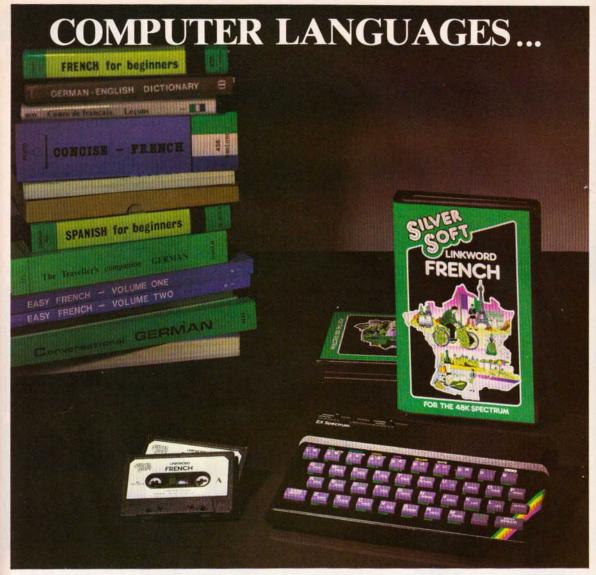

At only £5.95 each, they re destined to be big stars on the small-screen!

Selected Sinclair software lines are available from W.H. Smith computer stores, larger branches of Boots, John Menzies, Greens and most other software stockists nationwide.

Sinclair Research Ltd, Camberley (0276) 685311.

Sinclair, ZX and ZX Spectrum are trade marks of Sinclair Research Ltd.

Imagine a ferret in a hardware shop

Not something you'd forget. That's how the Linkword System helps you remember that the Spanish for "hardware shop" is "ferreteria".

You'll remember that the French for "fish" is "poisson" by imagining poisoning your pet fish.

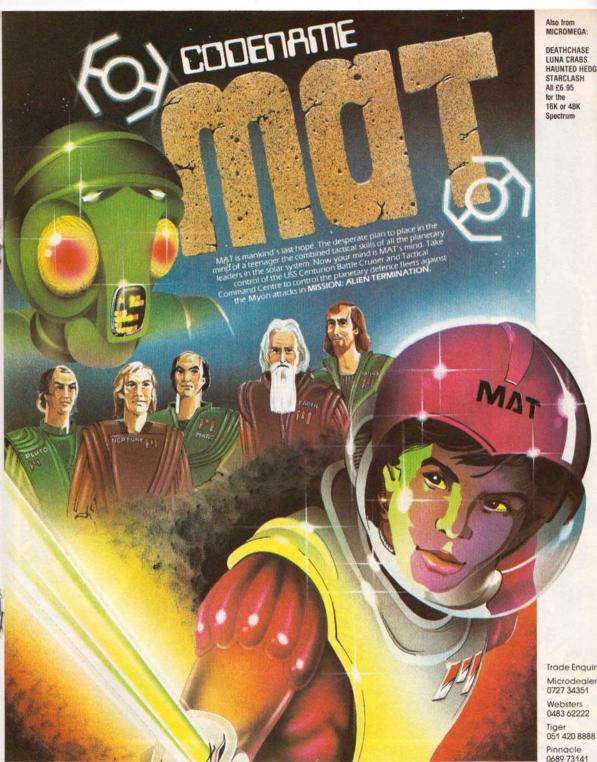

Using Linkword you'll learn over 350 words in only 10 hours, that's a quarter of the time it would normally take. Enough for holidays, business trips abroad or help with homework. Start from scratch, and it's amazing how quickly you learn a basic grammar and vocabulary.

Silversoft Ltd, London House, 271/273 King St, London W6 9LZ

Linkword courses in French, German and Spanish are now available from Silversoft for the 48K Spectrum home computer, and there are more to come soon.

They're the biggest thing in languages since the Tower of Babel.

Please send me French at £12.95 each plus 50p P&P.	GermanSpanish Linkword courses

good fit

A Fennell presents a simple program for the calculation of the line of best fit

and statistics students. It determines the gradient and intercept on the y axis squares method.

this program will be useful for maths (when x = 0) for the line of best fit, up to maximum of 20 points, using the least

The maximum number of points could be changed by altering the Dim statements at line 100 and the test condition at line 170

Chess Clock

on BBC

When you get bored of beating your computer at chess you may like to challenge your fellow human beings. This

chess clock is for the BBC B but can easily be converted to any computer. Program Notes

line 90 This hides the cursor.

line 100 This checks to see if the End of game flag E has been set by line 250.
This checks to see if any key has been pressed. If so then N is changed. N=0

lines 170-200

means that White is thinking. Convert Tsecs into Hours:Mins:Secs adding leading zeroes where necessary.

Draws a chessboard when 64secs remain. The board disappears square by square as time is consumed in line 240.

Microradio

Floor space

An attempt now to catch up with all the mail sent to the column. A personal reply to a query or letter will need a stamped addressed envelope, I cannot always reply with a personal letter although I do my best.

A letter has been received from a company called Softest who wish to inform ZX81 and Spectrum owners that they now produce the hardware and software necessary to use the ASR33 type teletypes as a computer printer. These old teletype machines are appearing in larger and larger quantities as the various concerns

that used teletype systems, such as the Post Office, are selling them off for very small sums indeed. I have often seen them on offer at the various radio rallies that occur throughout the year. So if you can give desk (or floor) space to one of these friendly beasts then they can now be used directly from the computer. They are not very fast machines, in fact they can be like watching paint dry beside the modern dot matrix machines. but they have the advantage of being cheap and giving a reasonable print quality. Softest can be reached at 10 Richmond Lane, Romsey, Hants, SO5 8LA.

To answer the people who wrote to me asking for more information on how and what is needed to get going in packet radio, the address to write to is in America: The Tucson Amateur Packet Radio Corporation, PO Box 22888, Tucson, Arizona, 85734, USA. One interesting

letter on the subject of packet radio came from Harald Holt G4/LA8WJ who lives in Kent. He is keen to get involved in Packet Radio and being both an amateur and a professional datacommunications engineer has a great deal of expertise to offer anyone attempting to set up a packet system. Microradio is keen to hear from anyone who has any experience in packet radio or anyone who is really keen to get a packet group set up so that we can get the show on the road in Europe. There is obviously a great deal of enthusiasm, evidenced by the number of letters on the subject. One example of this is a letter received from R J Liethof of Amsterdam who is keen to get further information. The only advice I can give is to keep reading this column.

Several people have written to me asking about implementing Morse or Radio Teletype on the Vic 20 computer and I'm afraid I have to answer that I don't know of any software in this line for the Vic. If anyone has any Vic 20 software of listings, please write in.

Mr G Craddock of Hartshill Staffs wrote asking for help with a Maplin Modem he had purchased, only to find that the basic program supplied by Maplin did little more than send data and characters to the screen. Obviously more sophisticated software is needed for the Dragon 32 to be used with the Maplin Modem, since the purchase of a modem does to some extent suggest that it may be used for bulletin boards, etc. If anyone can help (including Maplin) then please drop a line to Microradio.

Screen Dump

on Dragon

A lot of Dragon users have CGP 115 plotters. The problem is that there is no screen copy command. The CGP 115 has horizontal and vertical axis of 480 pixels as opposed to 255.

This program overcomes this problem by allowing the paper width to be stretched (or squashed) — change the number 1.8784 to 1.5 or 2.5 on one axis, otherwise

an enlargement results.

The design is shown as a series of dots on the paper but the picture is still clear. Use the colour select to print the design. Be prepared to wait — this painting by numbers takes up to 30 minutes.

```
70 FOR Y=0 TO 191
80 FOR X=0 TO 255
90 U=PPOINT(X,Y)
100 IF U<>B THEN GOSUB 150
110 NEXT X

Screen Dump by Mark Harrison

Arcade Avenue

Charm of the original

Several new versions of old arcade favourites have been released recently but under such obscure names that people looking for copies of familiar games, or trying to avoid them, may be confused. I thought that every so often I would run through what's what amongst the latest games so that you can find out what you are buying. I couldn't say whether it's due to fear of the copyright laws or guilt about their lack of new ideas that leads companies to dream up such peculiar names.

Anyway, recently there have appeared a rash of Buck Rogers type programs, notably Quasar from Voyager Software and Megahawk from Big G, both for the Commodore 64. Blade Alley has also been released for the Spectrum from PSS. It's no surprise that

the Commodore games have the edge graphically, but Blade Alley is a superb piece of programming and is reasonably faithful to the original, although with less screens to get through. Of the other two, Megahawks is least like the true Buck Rogers but probably has the best graphics.

The main criticism of these games is that the 3D perspective makes them rather hard to play. It can be almost impossible to judge accurately when your ship is on the same level as the aliens — scoring is as much by luck than judgement. Still, this is also true of the original and I suppose it doesn't spoil the enjoyment.

PSS have also released a version of the slightly obscure arcade game *Tempest*. Like Atari's more recent *Star Wars* or the old chestnut *Asteroids*, *Tempest* was produced using line vector graphics. The PSS version hides behind the name *The Guardian* and involves

spinning your triangular ship around the edge of a cube, from the centre of which radiate various alien dots and squiggles. Needless to say you shoot them before they reach the edge. It is a difficult game to explain but a simple one to play and it owed much of its orginal charm to speed and loud zappy noises. Unfortunately, these two qualities are what the Spectrum most lacks but it is a fair attempt nevertheless.

Finally for this week, Bimbo for the Spectrum from Joe the Lion is in fact a heavily disguised version of the game Road Runner. The original was a bit like Ultimate's TransAm. You drive your little racing car around a maze collecting cups and avoiding killer enemy cars. A radar screen reveals the whereabouts of cups, and the enemy, and you can leave trails of smoke at strategic points to delay the pursuing cars. In Bimbo you are a rab-

bit looking for carrots in a maze. You are constantly pursued by killer enemy rabbits and can drop apples to delay them. You are also provided with (a wonderful concept) a carrot detecting radar. The movement of this game is jerkier than the original but, to give it the benefit of the doubt, this is probably to simulate a rabbit's hops. Unfortunately, the most enjoyable part about Road Runner was the perpetually playing, jazzy music so I would expect some better copies to appear on other machines, such as the Commodore.

Tony Kendle

The Arcade Corner is a new section for anyone who enjoys playing arcade games. If you have any comments, from playing lips on difficult games or programs you'd particularly like to praise (or blame!) then write to: Tony Kendle, Arcade Avenue, Popular Computing Week-ly, 12-13 Little Newport Street, London WC2R 3LD.

ALL COMMODORE USERS!

Do you use tapes? Are you sick and tired of waiting for your programs to be Loaded/Saved from/on the tape? Then you need a TORNADO!! Tornado allows you to Save/Load/Verify your Basic/machine code programs faster than a CBM 1541 disk drive does!! Due to popular demand! Tornado now comes with new and more powerful commands plus extra instructions to assist you in making fast versions of your existing machine code/Basic programs. Tornado is available on tape for CBM 64 and 8K+

Do your Run/Stop and Restore keys often fail? Do you want to come out of those crashes?! Or get into those unbreakable programs?! Then what are you waiting for, get yourself a

BREAKER!! Reset switch and let your computer know who is the boss!! Breaker can be connected to your machine in seconds, no soldering. Included with the Breaker reset switch is extra backup software on tape. Breaker is now available for any CBM 64 or Vic 20.

Available for CBM 64 and the Vic 20 now is the

ROM-FILE which contains a complete disassembly of CBM 64/Vic 20 Rom with comments! As well as a complete description of all 6502/6510 instructions and addressing modes + a complete listing of a machine code monitor and more!

AVAILABLE NOW

THE QUILL is a major new utility written in machine code which allows even the novice programmer to produce high-speed machine code adventures of superior quality to many available at the moment without any knowledge of machine code whatsoever.

Using a menu selection system you may create well over 200 locations, describe them and connect routes between them. You may then fill them with objects and problems of your choice. Having tested your adventure you may alter and experiment with any section with the greatest of ease. A part formed adventure may be saved to tape for later completion. When you have done so THE QUILL will allow you to produce a copy of your adventure which will run independently of the main QUILL editor, so that you may give copies away to your friends.

THE QUILL is provided with a detailed tutorial manual which covers every aspect of its use in writing adventures.

Please send me details and an order form for The Commodore Ouill

DUCKWORTH HOME COMPUTING

THE ADVENTURER'S COMPANION Mike and Peter Gerrard

How do I survive the pale bulbous eyes? How do I get past the troll? Where is the Pirate's Chest? How do I escape the Goblin's Dungeon?

In response to these and hundreds of other questions sent in to magazines by frustrated adventurers, here is a complete guide to playing four of the most popular adventures on home micros today: The Hobbit, Colossal Cave Adventure, Adventureland and Pirate Adventure. The book provides a solution to every problem you will meet, and is designed to enable you to look up the answer without giving away anything of the rest of the adventure. It also includes complete maps for all four adventures. £3.95

THE ADVENTURER'S NOTEBOOK

Mike Gerrard

This book is for both beginners and regular adventure players. It explains what an adventure game is, gives a history of adventure games, includes hints on how to play games more successfully and a list of recommended adventures. The main part of the book consists of a series of maps with space for your notes on verbs, nouns, locations, how to pass obstacles - everything the keen adventurer needs in order to keep all those scribbled sheets and notes together in one book. £3.95

Mike and Peter Gerrard are regular contributors to Which Micro? and Personal Computer News. Peter Gerrard is the author of many titles in the Duckworth Home Computing list, including the Exploring Adventures series, and contributes to Popular Computing Weekly, Commodore Horizons and Micro Adventurer

Tony Bridge's Adventure Corner

Urban horror!

Richard Shepherd is a name that has been on a lot of best-selling software, from the very beginning of the ZX81, through to the present crowded scene. Recently the company has branched out from the original Sinclair-only policy to encompass the Dragon and Commodore machines (with Commodore software available on disc).

Urban Upstart, written by Peter Cooke, is a text/graphic adventure. The scenario is rather unusual, placing you, the heroine, in good old Scarthorpe, from which you have to escape (why, I don't knowl).

You wake, early in the morning, in a pleasant little bedroom - in the room with you is a pair of dungarees. There a few locations ot be visited in the house, and some objects which you will need in your travels, but eventually you will have to venture forth from this oasis in the revolting

town of Scarthorpe.

The game follows the usual procedure, with the adventurer exploring several locations, and finding the occasional object lying around. Buildings may be entered, but beware of the lorries standing, invitingly empty. The jail is a bit of an enigma – the player is often thrown unceremoniously into a cell, but it is very easy to escape, and this part of the scenario only wastes time. There is a version of the time-honoured Maze, but this time it is a Hospital. It can be the very devil to get out of, but then, there is a simple way of avoiding the catastrophe.

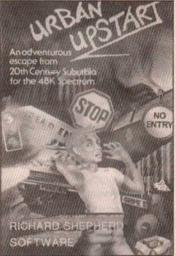

What of the graphics? Well, they're quite nicely drawn, but rather slow. This lends a certain suspense to the proceedings the first time round, but on subsequent visits to the location, the whole process becomes rather boring, and quite frankly, I think a Graphics On-/Off option should be provided.

Another detail that I think Spectrum authors have overlooked is the fact that when the adventurer has opened a door, or dropped an object at a certain location, the picture should, surely, reflect this and show the open door, or the object lying on the ground. It's a thing that American players have become used to, through programs like the Scott Adams graphic adventures, Blade of Blackpoole and so on.

But, don't let all this put you off the adventure. The descriptions are rather terse, but nevertheless, the program fairly oozes atmosphere, and to my mind, atmosphere is one of the most important elements of a good adventure.

ments of a good adventure.
In passing, one of Richard's strongest beliefs, gained from ploughing though many hundreds of "Help Me" letters, is that a surprisingly large number of adventurers

get stuck simply because they have not read the instructions! At the basic level, it's obviously a good idea to see what commands the program will accept – don't assume that the usual commands will be

recognised. Some adventures require the player to type out directions in full, while others accept single-key entries.

Reading the instructions thoroughly may also yield up a clue or two, so take a moment or two in going through any instructions.

Incidentally, reviewers of adventures are always glad to have a solution included with the tape – initial locations can often be hard to-crack, and time is always limited!

Marco van Slageren from Amsterdam is visiting Scarthorpe at the moment. On your travels, Marco, you may have been thrown into jail for indecent exposure; to get out of jail, you'll need the Hat from the Wastelands – to get past the Police Guard, just wait around for a while! The Red Tape is needed to get into the Town Hall. As for your question about *Smuggler's Cove*, you may find that the Slab will move if you "Push" it – I have a feeling that the lever by the Elevator may also move some impassable object.

James Arnold of Camberley is playing Snowball, and finds progress blocked by the Waldroid – to get past him:

DBWL/ITTN/HDTT/HHEE/AWEA/RLOD/SROO/LI

This series of articles is designed for novice and experienced Adventurers alike. Each week Tony Bridge will be looking at different Adventures and advising you on some of the problems and pitfalls you can expect to encounter. So, if you have an Adventure you want reviewed, or if you are stuck in an Adventure and cannot progress any further write to: Tony Bridge, Adventure Corner, Popular Computing Weekly, 12-13 Little Newport Street, London WC2R 3LD.

Are you stuck in an adventure? Are you faced by a problem that seems insurmountable? Adventure Helpline may be the answer.

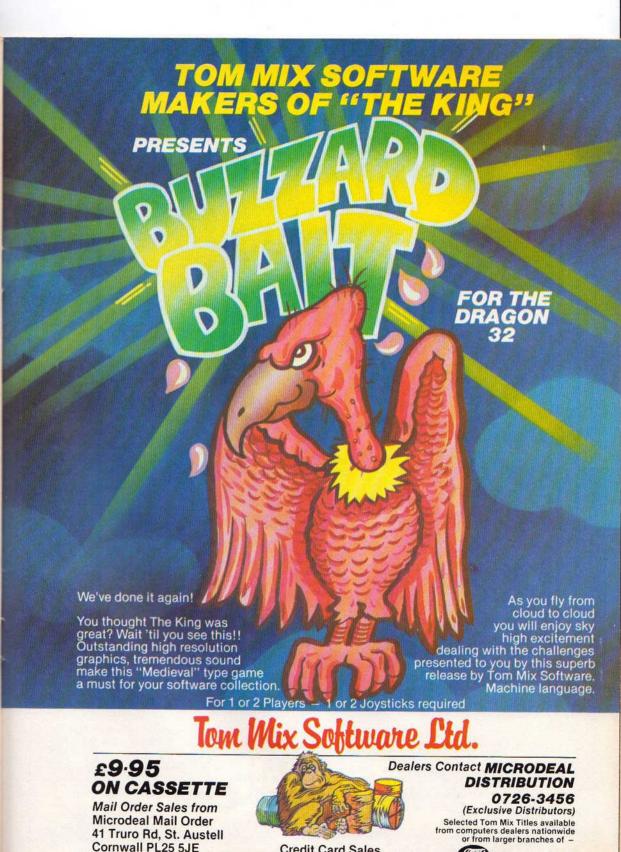

Adventure Helpline is, quite simply, designed to put adventurers in touch with one another. Where you may be stumped by a baffling puzzle, a fellow adventurer may be able to help. By the same token, you may be able to help other people with their problems. If you are having difficulties with an adventure, fill in the accompanying coupon and send it to:

Adventure Helpline
Popular Computing Weekly

12-13 Little Newport Street London WC2R 3LD

We shall publish Adventure Helpline entries each week in their own special column.

In The Beginning

The QL QLassics

Sunshine books introduce the QL QLassics, a brand-new range of superbly written, highly informative books that will help you exploit the many and varied possibilities of this eagerly-awaited new micro.

The QL QLassics are in production now for full availability in the summer. And that's definite.

Like all Sunshine books, these are more than mere manuals. Inside you'll discover ways and means to help your business, your hobby – and your future.

Look out for the Sunshine range in W.H. Smith's, Boots, John Menzies, other leading retail chains and all good bookshops. Dealer enquiries: 01-437 4343

Pre-Release QL QLassics Information.

Please send me your free Sunshine QL QLassics brochure, detailing all the books available soon.

House Of Usher

3 NEW TURBO 64 GAMES £6.95 EACH

House of Usher

Dare you enter the House of Usher. Behind each locked door of this nine room mansion a different style of arcade action awaits you.

Petch

ETC

The wonder penguin is engaged in a desperate search for diamonds hidden in a maze of ice cubes, harassed and chased by his arch enemies Snowball and Snowbox. His chances of survival are slim. Six levels of skill with two player option.

Ice Hunter

Ice hunter needs special ice blocks to build an igloo unaffected by the arctic sun. He has found the source of the blocks in a multi level cavern, but can he outwit the grim inhabitants—the dragons—sea lions and vicious birds and float the blocks down the river to construct his dream home. Six levels and two player option.

New Releases

and tacks — earn money for each square covered with a bonus for covering rival carpetfitters.

As a game I found it so-so. What's really bizarre is that technically the game is about a year out of date—all character square graphics with no animation. More surprising still the blurb claims it's written in machine code—my bet is that it's compiled Basic.

In fact if it wasn't for the colour it would actually be a pretty average ZX81 game. Terminal have produced some good games in the past and like those this comes in a nicely designed colour cassette box that makes the game seem a lot slicker than it is. I'm a bit surprised Terminal put this one out.

Program Price Micro Supplier Carpet Capers £5.95 Spectrum Terminal Software Derby House Derby Street Bury BL9 0NW

LADDERED

Castle Assault is an amiable dodge everything game from MRM software. Using a series of ladders you have to climb up to the top of a castle thereby to grab a pot of gold.

Your journey up the castle involves moving platforms, falling rocks, various insects including crabs, snakes, lobsters, spiders etc and worst of all deadly flying ducks — all of which can bite, crush, sting or bash you and thereby thwart your task.

A variety of fruits improve the situation somewhat earning you bonus points as you battle your way to the top. The graphics are excellent as is the music and at £5.70 it's very good value.

Program Price Micro Supplier Castle Assault £5.70 BBC (OS1.2) MRM Software 17 Cross Coates Road Grimsby South Humberside.

WRITE ON

Tasword has gained an enviable reputation as not only the best word processor for the Spectrum but as a word processor better than many available for other, superficially more word processing orientated, machines.

The success of the program has brought support from its parent company in the form of a special centronics interface driven by software contained in the program and Microdrive compatability. Support continues now with a new program *Tasprint* which can be merged with the original *Tasword*.

The program is a font selector which will drive any bit image printer to produce a variety of interesting type faces, from the futuristic Data-Run to the more elegant Palace script.

It's not the first of its type, but the compatability with Tasword makes this program especially useful and can improve the range of styles usable in letters etc. no end.

Program Price Micro Supplier Tasprint £9.90 Spectrum Tasman Software 17 Hartley Crescent Leeds LS6 2LL

POT OF GOLD

Dragon Data is a strange company — it releases some pretty awful programs in large cassette boxes and with much trumpeting, yet something like Shenanigans slips out unnoticed. Speaking purely personally, I think Shenanigans is probably the best adventure I've ever seen on the machine — it should even make a few Spectrum owners jealous.

The object of this graphic

adventure is to discover the pot of gold at the end of the rainbow. As most people know, using effective hi-res on the Dragon means having pictures that are in black and white — whilst this is true of Shenanigans the limitation has been turned into an advantage, using shading techniques and careful design, the black and white gives the programs a sense of atmosphere that garish colours may well have lacked.

The actual text input is straightforward verb noun but the clues and conundrums are as imaginative and clever as you'll find anywhere. As to help, all I can suggest is that you put some clothes on and avoid muggers.

SPEEDY

McVid is a machine code graphics utility for both the BBC and the Electron. What you get is essentially a mixture of an artist's designer type program and a sprite generator/mover.

The various functions have

been designed for both speed and memory conservation screen scrolling is very fast and each shape line is defined in only three bytes.

The program doesn't specify the operating system so should be fully compatable. It comes with a manual and a commented source listing intended to enable easy modification of the routines for specific purposes.

Program Price Micro Supplier McVid £14.95 BBC/Electron Pro Supply 4 Beech Court Pocklington York Y04 2NE

HARD WORK

A weird one this. The Golden Quest is a program which consists of a series of clues to the location of a special token which wins whoever locates it £1,000 plus £1 for every cassette sold.

If you like it's a bit like Pimania but without the adventure and with more varied clues. From a brief glance it looks as though you'll have your work cut out with this one—supply yourself with a variety of maps and reference works if you are seriously interested in cracking it.

The usual technical criteria are pretty irrelevant — just as well really as it is in slow Basic and if you aren't thinking about the conundrums it's very boring. Still it's a good idea.

Program Price Micro Supplier The Golden Quest £7.50 Spectrum Printout 27 St Michael's Street Caldmore Walsall West Midlands.

New Releases is designed to let people know what software is coming on to the market. If you have a new game or utility which you are about to release send a copy and accompanying details to: New Releases, Popular Computing Weekly, 12-13 Little Newport Street, WCZR 3LD.

New Releases

ALL AT SEA

Sea Adventure is an adventure game for the BBC which takes in ghost ships, storms, strange islands etc, etc. It also has, somewhat of a rarity among

BBC adventures where memory is short, graphics, which are simple but quite effective.

You have to admire Virgin's cheek, as the cover blurb says proudly 'An added bonus... is the one key instruction method. All instructions are given by pressing just one key. No more typing degrees required to play this game!'—this is doublethink gone mad.

Program Price Micro Supplier

Sea Adventure £7.95 BBC B Virgin Games 61/63 Portobello Road London WII 3DD

GOTHIC

Revelation is an arcade game so gothic and creepy I can see a few adventure freaks giving their typing fingers a rest and grabbing a joystick.

In the caverns of hell astride a sacred Eagle you battle off monstrous hordes of dragons, demons, imps and serpents. These get in your way as you destroy the dark lord's various towers (these turn into pentacles for some reason.)

If you destroy all the towers in one screen you can go on to the next. Obviously what we have here is pretty much your standard 'dodge everything and if possible kill it' game, but the music and graphics are excellent and it's much more addictive than most.

Program Price Micro Supplier Revelation £7.95 Commodore 64 Softek International Softek House Tanquil House Blackheath London SE3

ARTHURIAN

Latest game from Ocean is Cavelon released almost simultaneously on the Commodore 64 and the Spectrum. It's a game with vaguely Arthurian legend overtones since you are trying to rescue the (poor foolish woman) imprisoned Guinevere.

This involves battling your way through half a dozen mazes past various deadly knights who run at you and hurl what look like fireballs as you try to find the various bits of the door thereby gaining an exit to the next level.

You can defend yourself either by running away (always a good policy I find) or by finding one of the wandering Excaliburs which give you some temporary immunity from danger.

If you make it to the final level you rescue Guinevere and the two of you fly off on your horse which turns into Pegasus (shome mishtake ere I think) and zooms off into the sunset with the two of you on its back. Afterwards I expect Guin gets you a nice meal and fixes your torn clothes while you go out for a knight with the lads.

The graphics are excellent and although in a way this is really only a maze type game in disguise it's a lot of fun to play.

Program Price Micro Supplier Cavelon £6.90 Commodore 64 Ocean Software 6 Central Street Manchester M2 5NS

CARPET BEATER

Carpet Capers is a rather astonishing release from Terminal Software for the 48K Spectrum. The general idea of the game is of the 'complicated arcade' school so much in vogue at the moment. You have to lay carpets which involves collecting hammers, cutters

Pick of the week

You will doubtless have heard much about the Lords of Midnight from Beyond Software the game is finally available.

It's a substantial program and as such, is going to need a fuller review than is possible here, but it is possible to pick out a number of main features.

Although the graphics are static, unlike say, Valhalla they are a definite step beyond the 'illustrations' of something like The Hobbit. This is because of something Beyond call Landscaping which is basically a way of giving a true 3D logic to movement through the land of Midnight. For example, if you go north from somewhere and then look south from the new location you will see where

IN THE MIDNIGHT HOUR

you've just been although reversed (if you see what I mean).

Midnight is vaguely a wargame and vaguely an adventrue and within it it is possible to win the game in two different ways either as an adventure (guiding Morkin to the Tower of Doom) or as a strate-

gy (moving enough forces north to the Plains of Despair to attack the Citadel of Ushgarak). Either way there are a vast number of factors to be considered at any stage and a wide variety of different options — despite the single keyword entry.

There are 32 characters you may be able to control (it depends if they decide to join with you); you see the

viewpoint of each individual character separately — you look through each one's eyes and try to correlate the overall movement.

The computer controls the baddies who are collectively known as Doomdark — Doomdark move by night and a description of the battles that take place fills the screen (the prose is genuinely purple).

To what extent Lords of Midnight is a genuine adventure remains to be seen, its claims as a strategy game are far more obvious and as such it must be one of the most sophisticated ever designed. Whatever you call it, it's great fun to play and technically brilliant — and that would seem as good a place to start as any.

BIGGEST

Beginner's Basic is almost certainly the biggest book on this most prevalent of book computing titles and it may also be one of the best.

The book is not machine specific — this is usually a bad sign since general books tend to lack much practical value — however the coverage is so thorough it should be useful whatever machine you have bought.

PRACTICAL

Practical Uses for the Microcomputer in the Home is a collection of 14 programs that you might conceivably find a use for — all are written to Microsoft Basic standard with some advice on converting them in the back of the book.

Whilst you might have found any of the programs in this or other magazines it might be

useful to have them collected together Titles include: Wallpaper calculator, Shopping list, Calendar, Bank Statements, Car file, V.A.T. etc.

Ziggurat

Money talk

It is Christmas, or some other occasion when relatives descend from all over the land determined to enjoy the festive spirit. The turkey has been consumed, no match for the vicious teeth carefully crafted by the NHS. The pudding has suffered a similar fate, and the table resembles a battlefield strewn with the discarded corpses of paper hats, bottles and cracker ends.

The alcohol is flowing freely and gossip is passing back and forth. The seemingly endless list of births/deaths/marriages/scandal which has accumulated since the last time the tribe met is trotted out. Soon all has been discussed, tutted over, and dismissed. There is a lull in the conversation, and attention is focussed on the youngest of the brood.

One great-aunt leans ponderously forward, blissfully unaware of the havoc she has caused behind her with an uncle's drink.

"How is little Willie getting on these days?" she inquires, waving a casual hand in the direction of 'little' Willie who is sat, glowering at his relatives and trying to avoid the fussing of his ancient aunts. His mind is on computers and garning as ever — an escape from all this.

"William is at college," comes the reply from proud, beaming parents. There are exclamations of surprise and congratulations from relatives unsure what a "college" is exactly.

"What is he doing there?" a great-uncle puts in tentatively, remembering his distant days at Oxbridge.

"Computing." There are further cries of astonishment, and a few whispers of uncertainty.

"Computers, eh, computers?" A wise old uncle puts in. "There's money in that."

"Money in that", "Ay, money." A general nodding of heads — the thought of money seems to comfort them.

One aunt pauses and scratches her head. "What is a computer, exactly?" she inquires innocently, "a sort of calculator?"

"Sort of, Aunty," 'Little' Willie replies. "But it is much more complex." There, he thinks, that should put her off.

"How's that, dear?" she presses on, undeterred.

Willie sighs and looks pleadingly at his mother. She glares and gives him one of her Talk-toyour-Great-Aunt-Batty-and-be-polite-we-onlysee-her-once-a-year stares. Willie sighs and soldiers on.

"Well, Aunty, it's got a little device called a microprocessor, then there is a keyboard, a display and the storage medium ..."

Great Aunt Batty leans forward again, narrowly missing Cousin Clive's glass this time. "I'm not sure I understand all those terms," she interrupts.

"Well, let's go through them one at a time — what first?"

"What's a ... what's a keyboard?"

Just then, Willie's interrogation is disrupted by Cousin Don choking on that "last piece of Christmas pudding he just had to have". Relatives leap from all over the room to administer aid, and in the confusion, Willie steals away. Now, he can get on with his new program in peace.

Taking computing as a career is fun, but explanations of what it is you exactly do can be a tribulation; especially when you come up against relatives. However, there are compensations, so next time you are stuck talking to that long-lost uncle who is convinced that a transistor is used to pick up the home service, and a computer is someone who goes to work on the train; comfort yourself with the constant comment: "Computing? Ay, there's money in that!"

Mike Lewis

Heatwave

Puzzle No 110

Alison, Ron, Connie, David and Emma were finding the heatwave difficult to handle and badly needed refreshment in the shape of ice creams.

"How much will that cost me," I asked, emptying out my wordly wealth from my pocket — which only turned out to be five each of pennies, two-pences, five-pences, ten-pences and twenty-pences.

They told me the cost of the five ice-creams and being smart I said: "Tell me the number of different ways in which you can make the total cost with these coins, using each type of coin at least once, and you can have the cash."

The thirsty five — reluctantly went away with pencil and paper and presently announced "Twenty-eight" — the correct answer.

If the ice-creams were all the same can you say how much each ice-cream cost?

Solution to Puzzle No 105

The program works out the surface areas of cuboids in ascending order to magnitude and checks to see if their area could represent a rectangle one and a half times as high as it is wide. There are many sets of answers, but it is the smallest that is required.

10 LET D=2 20 FOR A=1 TO 20 30 IF A=D THEN GOTO 140 46 FOR B=1 TO 20 50 IF A=B OR B=D THEN GOTO 130 56 FOR C=1 TO 20 70 IF C=B OR C=A OR C=D THEN GOTO 120 80 LET F=3*D*D 90 LET R=4* (A*B + B*C + A*C) 100 IF R p/13 F THEN GOTO 150 110 IF R=F THEN PRINT "Rostrum"; A; "X"; B: "X" C; feet"; "Flat"; D; "X"; 3*D*D; feet" 120 NEXT C 130 NEXT B 140 NEXT A 150 LET D = D + 2 150 GOTO 20

The rostrum measures either 1 \times 3 \times 18 feet or 3 \times 4 \times 9 feet and the flat measures 10 \times 15 feet — each having a surface area of 150 square feet.

Winner of Puzzle No 105

The winner is Andrew McFadyean, Bradford Street, Birstall, Batley, W Yorks, who receives £10.

Rules

The closing date for entries to Puzzle No 110 is June 22.
